

Stop Lose Order

Mr. Chan bought 100 shares of stock ABCD at \$101, currently trading at \$100 per share. He would like to sell the stock at marker price once it drops to \$98 in order to reduce loses. On the trading page, He places the sell market order by clicking the sell button, entering 100 shares in the quantity field and trigger price at \$98. Since this is a market order, he leaves the price blank, and selects market order. After he confirms his order, once the price reaches \$98, stock will be sold at the market price.

Stop Gain Order

Mr. Chan bought 100 shares of stock ABCD at \$95, currently trading at \$100 per share. He would like to sell the stock at marker price once it up to \$98 in order to protect profit. On the trading page, He places the sell market order by clicking the sell button, entering 100 shares in the quantity field and trigger price at \$98. Since this is a market order, he leaves the price blank, and selects market order. After he confirms his order, once the price reaches \$98, stock will be sold at the market price.
